

## INTELLIGENT PLANNING & ANALYTICS

Planning Maestro was designed to take advantage of modern technologies and advances in cloud computing and is optimized for performance, scale, integration and automation.

### Centage Data Integrator Overview

Centage's Data Integrator (CDI) is a standalone application that provides an easy and seamless option to automate the secure transmission of financial information to Planning Maestro.

CDI is designed for quick and simple integration with your GL, ERP and other relevant data sources, whether in the cloud or on-premise.

CDI uses a secure REST API endpoint that is capable of ingesting data in a file format and supports both scheduled uploads of financial actuals and metadata, as well as on-demand data import through its user interface.

- ▶ Installs locally and is a Windows application
- ▶ Uses approximately 25MB of disk space when compressed in a zip
- ▶ Requires a minimum of 100MB of memory

By providing data from the source of your choice in a Comma Separated Values (CSV) file, confirmed to the Centage Interchange Format (CIF), CDI can grab that data on a nightly schedule to be transmitted to Planning Maestro.

#### CENTAGE'S DATA INTEGRATOR ALLOWS YOU TO:

- ▶ Import your chart of accounts and structures ensuring all are accurately reflected in Planning Maestro
- ▶ Import actual GL transactions and non-financial activity
- ▶ Do a quick and easy upload of account summary to compare to plan, budget, forecast or any scenario for variance analysis
